

- Made margins on the sides of the chart to show text etc.
- Made width and height of chart reasonable values for most displays
- Made tooltip silver (nice neutral color with the steelblue or red of bars)
- Made nice transition when tooltip appears, just responsive enough but not appears/disappears not too abruptly (200 ms transition durations)
- Make text below x axis vertical, because the string are quite lengthy. They won't get in each others way now
- Write text next to y axis ("Rainfall (mm)"), vertical as well so it doesn't take up too much space
- Make bars red when hovering mouse over them, nice contrast with normal steelblue
